Although Patentees presented method and apparatus claims in the original patent, they failed to present claims specifically directed to a bitstream for push dataflow communication to a decoder having a data buffer of predetermined memory size, the bitstream being obtained by encoding data in accordance with a model of the decoder buffer so that the modeled buffer does not overflow or underflow. The present broadening reissue broadens the claims to include the features noted above.

In particular, new claims 82-94 are directed toward a bitstream as described above. Support for these claims is found, e.g., in column 1, line 48 through column 2, line 26; column 4, lines 20-36; column 5, lines 8-28; Figures 1 and 2; and claims 1, 3-16, 21, 33, 35-48, 53, 65-81 of the patent.
